REPLY OF QUESTION	2024-01-03 08:55:37	<p>Okay, this is starting to really drive me crazy... I'm using VSCode to develop remotely from my MacBook on my Ubuntu workstation. And sometimes I'm stuck in a 're-connect loop'. I can ssh or remote-desktop onto that machine just fine, but VS Code refuses to connect.</p> <p>Sometimes this happens when (as it seems) lots o data is sent over the wire (e. g. when I open the Git view and it loads the most recent commits), sometimes it happens when I edit the 'launch.json'. Sometimes (as since yesterday) it plainly refuses to load "any"thing. Restarting the machine(s) didn't help. Of course I can develop on Ubuntu, but my setup is pretty much centered around MacOS...</p> <p>In the 'Output' tab I get this:</p> <pre> &gt; &gt; [09:50:08.697] Remote server is listening on port 46077 &gt; [09:50:08.697] Parsed server configuration: {'serverConfiguration':   {'remoteListeningOn': {'port': 46077}, 'osReleaseId': 'ubuntu', 'arch': 'x86_64', 'webUiAccessToken': '', 'sshAuthSo ck': '', 'display': '', 'tmpDir': '/run/user/1000', 'platform': 'linux', 'connectionToken': '1a11 a1a1-a1aa-1aa1-1a1a-aaa11aa1111'}, 'installUnpackCode': ''} &gt; [09:50:08.698] Persisting server connection details to /Users/jan- niklasjaschke/Library/Application Support/Code/User/globalStorage/ms-vscode- remote.remote-ssh/vscode-ssh-host-21906f24- 0ee08df0cf4527e40edc9aa28f4b5bd38bbff2b2-0.107.1-tr/data.json &gt; [09:50:08.699] Starting forwarding server. local port 54640 -&gt; socksPort 54609 -&gt; remotePort 46077 &gt; [09:50:08.699] Forwarding server listening on port 54640 &gt; [09:50:08.699] Waiting for ssh tunnel to be ready &gt; [09:50:08.700] Tunneled port 46077 to local port 54640 &gt; [09:50:08.700] Resolved 'ssh-remote+windmachine' to 'port 54640' &gt; [09:50:08.700] [Forwarding server port 54640] Got connection 0 &gt; [09:50:08.703] ----- &gt; &gt; &gt; &gt; &gt; &gt; &gt; [09:50:22.715] Server delay-shutdown request failed: connect ECONNREFUSED /var/folders/k6/gcjp245n2l9c4305cypw6_5c0000gn/T/vscode-ssh-askpass- efcfa2d26c7a3e237309ec77461e03e0cacbc0.sock &gt; [09:50:22.715] [Forwarding server port 54640] Got connection 1 &gt; [09:50:22.716] &gt; local-server-3&gt; Timed out &gt; [09:50:22.716] Local server exit: 0 &gt; [09:50:22.718] Failed to set up socket for dynamic port forward to remote port 46077: connect ECONNREFUSED 127.0.0.1:54609. Is the remote port correct?  While the final message (ECONNREFUSED) sounds like it could be a hint, interestingly I get that message as well even if everything works fine. Has anyone else already encountered this and happens to know how to resolve that? If not, it looks like I need to raise a github issue... (The machines are connected via LAN. No WiFi.) </pre>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Question lacks context	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Question lacks context	Exclude	
REPLY OF QUESTION	2024-01-09 16:25:11	<p>&gt; &lt;@supressed_user&gt; Does anyone know if we encode the hg revision into local builds at all, in a way that can be discovered? (I know it's on about: buildconfig for official builds, but we don't show the revision there in local builds)</p> <p>You could try looking for the implementation of one of these maybe? <a href="https://searchfox.org/mozilla-central/search?q=buildid&amp;path=.idl&amp;case=false&amp;regexp=false">https://searchfox.org/mozilla-central/search?q=buildid&amp;path=.idl&amp;case=false&amp;regexp=false</a></p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>		<input checked="" type="checkbox"/>	<input type="checkbox"/>		Include	Include

REPLY OF QUESTION	2024-01-10 21:35:26	<p>&gt; &lt;@supressed_user&gt; Ack. Evidently selenium, karma and likely most other test frameworks have been using firefox-bin for over a decade without any deprecation or warning or other signal to believe it that it is incorrect. I don't know why they adopted this script originally, or what gave them reason to believe it would be supported by upstream.</p> <p>&gt;</p> <p>&gt; I imagine if documentation said what the correct way is, it would not have led anyone to change until working code stops working :-).</p> <p>&gt;</p> <p>&gt; It's been in Karma unchanged for 11+ years. I imagine it's similar in Selenium, Airtap, TestCafe, Jasmine, etc. , e.g. <a href="https://github.com/karma-runner/karma-firefox-launcher/blame/6fab41e868e09629370d5d511a4909d153006a0f/index.js">https://github.com/karma-runner/karma-firefox-launcher/blame/6fab41e868e09629370d5d511a4909d153006a0f/index.js</a></p> <p>&gt;</p> <p>&gt; I imagine there was a reason firefox-bin was introduced originally, and that perhaps it was the only way to do automation at first, is that true? As a user, I would probably have expected some kind of stderr warning to be present for a while if people were not supposed to use it anymore.</p> <p>&gt;</p> <p>&gt; Or, indeed, for it to be removed outright with a release note indicating what to use instead. That probably would've been fairly okay, "if" we believe that developers can easily rollback their Firefox install on MacOS to a working version until the various layers of abstractions get fixed propagate through the wonderful world of npm and its average dependency depth.</p> <p>&gt;</p> <p>&gt; To me, one interesting data point is that even mozilla/geckodriver (or mozrunner) was still using it. So even if someone looked at that for inspiration as recent as last month, they would have found firefox-bin.</p> <p>&gt;</p> <p>&gt; In any event, I recognise firefox-bin wasn't planned to break or be removed this soon. The Passkeys feature changed the macOS security rules that get applied, and that brought it all forward unexpectedly. Having said that, I personally don't really have a way forward and expect to be finding broken dev environments for the next 1-2 years. Most likely contributors to the thousands of open source projects that chose to use Firefox locally, will either need to tell the average new contributor to use Chrome instead, or to work in a Linux container until the low-level fixes propagate to all the frameworks and their abstractions.</p> <p>&gt;</p> <p>&gt; If an alias or 2-line wrapper script in the other direction could be shipped, that'd probably go a long way toward favouring Firefox. Personally, I've changed many repos away from Chrome to Firefox because that avoided the whole Edge vs Chromium vs Chrome issue that many projects were suffering from ('It only works on my machine'), and avoided the '--no-sandbox' problem with Chrome for projects that use Docker containers, where Firefox has always 'just' worked everywhere.</p> <p>Feel free to open a bug.</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Not a question	Exclude	
REPLY OF QUESTION	2024-01-11 16:11:47	<p>&gt; &lt;@supressed_user&gt; So if most other rust modules have debugs compiled out in release builds, that will mitigate this (unless someone else does what nego does). What happens with local builds, Try builds, autoland/m-c builds? (We use m-c builds for perf tests, for example). It it just 'shippable' builds where the debugs are removed?</p> <p>I think any non-debug build would</p> <p>But yeah nego doesn't look at that compile feature (maybe intentionally?)</p> <p>jesup: in any case changing the global log level on all release builds is bad, can you file a bug?</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Question lacks context	Exclude

REPLY OF QUESTION	2024-01-26 15:54:28	<p>&gt; &lt;@supressed_user&gt; would someone know is there are differences between user selecting text with mouse click+drag and creating same selection with 'createRange'/'window.getSelection().addRange' ? I have a bug report with user text selection, but I can't reproduce it in test (where I'm using createRange to select some text)</p> <p>jdescottes found that the text selection actually creates 2 ranges, which explains why we have this difference. Is there any test helpers that would facilitate mimicking mouse text selection? The fix for the bug makes it so selecting the same area in the UI only creates a single range, so I can't really use addRange in tests to actually verify the fix</p> <p>mh, maybe something like <a href="https://searchfox.org/mozilla-central/rev/cee2c396081d950f9e3401113fb179999e404ab8/toolkit/components/aboutconfig/test/browser/browser_clipboard.js#34-57">https://searchfox.org/mozilla-central/rev/cee2c396081d950f9e3401113fb179999e404ab8/toolkit/components/aboutconfig/test/browser/browser_clipboard.js#34-57</a> would be enough</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>		<input checked="" type="checkbox"/>	<input type="checkbox"/>		Include	Exclude
REPLY OF QUESTION	2024-01-26 19:01:08	<p>&gt; &lt;@supressed_user&gt; Hi!</p> <p>&gt; Does 'navigator.mediaDevices.enumerateDevices()' _ever_ return more than one device of each type (video in, audio in, audio out)?</p> <p>&gt;</p> <p>&gt; It seems to be the case from using Firefox and looking at the related code, but I couldn't find it documented anywhere. I scoured a lot of issues on Bugzilla related to this, getUserMedia and resistFingerprinting, and saw no mention of this (e.g: <a href="https://bugzilla.mozilla.org/show_bug.cgi?id=1372073">https://bugzilla.mozilla.org/show_bug.cgi?id=1372073</a>).</p> <p>&gt; (Additionally, all guides to manually choose a different device seem outdated, and not work anymore, e.g: <a href="https://support.mozilla.org/en-US/questions/1225187">https://support.mozilla.org/en-US/questions/1225187</a>)</p> <p>Note ferenc_a mentions the 'privacy.resistFingerprinting' pref which significantly alters device selection. I've filed <a href="https://bugzil.la/1876810">https://bugzil.la/1876810</a> based on what I think the problem is. Feel free to comment</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Question sensitive to the time	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Question sensitive to the time	Exclude	
REPLY OF QUESTION	2024-01-27 18:50:06	<p>&gt; &lt;@supressed_user&gt; So it occurs to me I perhaps should have come here in the first place but for the past few days I have been attempting to build a new mozilla application largely based on experience with doing the same on a full xul codebase. It has been going surprisingly well save for a few build system bits that are looking for specific applications and don't have a fallback.</p> <p>&gt;</p> <p>&gt; Specifically, I wanted to ask if anyone else has come attempting the same in recent years and do you guys think it would be desirable to get ahold of a build system peer or simply file a bug to sort out these couple of things so that the rich technology crammed in the codebase can explode out again into many nifty web and mozilla-enabled projects?</p> <p>I think fixes for those would be worth putting at least on a bug, specially if they have been already written :)</p> <p>Feel free to send the patches the way of the #build reviewer group and cc me or so</p> <p>&gt; &lt;@supressed_user&gt; Here is a question: Is fluent a new separate system or is it still backed by stringbundles.. given no dtd's are in use in the codebase anymore?</p> <p>Fluent is completely separate to stringbundle afaict</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>		<input checked="" type="checkbox"/>	<input type="checkbox"/>		Include	Include
REPLY OF QUESTION	2024-01-27 18:55:02	<p>&gt; &lt;@supressed_user&gt; The current state, if anyone is interested, is: most of the main build files though most are empty and mac config was omitted temporarily to reduce complexity in the experiment, it compiles and runs and spawns an unnamed main window that has a label on it that says Netscape Now because Hello, world is boring.</p> <p>&gt;</p> <p>&gt; The end goal of the experiment is to produce a sample mozilla xhtml application with a main window, menubar, browser element, and can handle downloads, packages, and targets anything Firefox can.</p> <p>&gt;</p> <p>&gt; Beyond that? Anything really.. or so goes the theory.</p> <p>My understanding is that you can still do this with regular Firefox by overriding what xhtml file is opened on startup</p> <p>There was a python project that did that iirc</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Not a question	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Not a question	Exclude	

REPLY OF QUESTION	2024-01-29 20:46:30	<p>&gt; &lt;@supressed_user&gt; Hi team ,  &gt; Hope everybody is doing well.  &gt; We have a couple of [crash reports](https://bugzilla.mozilla.org/show_bug.cgi?id=1873619) on Android, coming from 'libutils.so', with the below stack.  &gt; Is somebody familiar with this?</p> <pre> &gt; ... &gt; Reason: SIGSEGV / SEGV_MAPERR &gt; 0 libutils.so libutils.so@0xede0 &gt; 1 boot.oat boot.oat@0x3844a0 &gt; 2 ? @0x00006e90148652e4 &gt; ... &gt; &gt; Thanks in advance </pre> <p>The stacks look rather bad. REPLY OF QUESTION	2024-02-16 23:42:20	<p>&gt; &lt;@supressed_user&gt; Hi, I think I have hit a bug in Firefox aurora 123.b09. After profiling, I noticed that <code>PollWrapper()</code> in <code>widget/gtk/nsAppShell.cpp</code> is where most samples are located in with self time of 7.360ms. &lt;del&gt;There is a <code>do while(true)</code> loop inside and I believe some assumption is being violated and this loops infinitely&lt;/del&gt;(on closer examination of profiler chart, the loopy call to <code>pollwrapper()</code> happens in <code>Webextensions</code> process. Still don't know what it means but definitely is making me consider other possibilities like some extension behaving badly). Can someone help me debug this ? how do I proceed ? This is the first time I am looking at gecko-dev codebase and I am doing this because I got curious.</p> <p>Share the profile, maybe in Joy of Profiling?</p> <p>But <code>PollWrapper</code> seems a bit of a red herring, that's just waiting for OS events in a loop, it shouldn't consume significant CPU time on its own. The interesting thing is what goes on inside</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Question sensitive to the time	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Question sensitive to the time	Exclude

REPLY OF QUESTION	2024-03-02 00:10:24	<p>&gt; &lt;@supressed_user&gt; Does anyone have opinions on the value of the Poison!OInterposer on Mac? It is disabled on Apple Silicon and disabling it on x64 Mac should allow us to turn on some additional security hardening. It is something we don't enable on Release. I'm trying to understand the value better. Also, why it's called 'Poison'?</p> <p>I think the basic idea is to have a line in the sand during XPCOM shutdown where we don't do any IO after that, so we can do an exit without worrying about something getting saved to disk. I feel like the project has been stalled out for many years. I don't remember if we actually do the quick exit or not. I don't know if it is doing anything useful on MacOS or not. As a practical matter, if it is already not enabled on Apple Silicon surely that is a sign we don't care too much about it...</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>		<input checked="" type="checkbox"/>	<input type="checkbox"/>		Include	Include
REPLY OF QUESTION	2024-03-05 08:42:21	<p>&gt; &lt;@supressed_user&gt; It's hard to fix ? there's not much noise about it</p> <p>Not sure off hand, seems worth checking in gfx-firefox. REPLY OF QUESTION	2024-04-04 17:02:11	<p>&gt; &lt;@supressed_user&gt; emilio: this has been worked on at nauseam by some people, I hope they are a around (later maybe?) there definitely shouldn't be any linkage to X calls, you guys worked a lot to remove that conclusively (2 years back, or so?)</p> <p>With apologies for the fly by...if this is something we committed to, we should probably write a test or two to verify we don't regress this.</p> <p>(I have no insight into what we did or did not commit to here though.)</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Follow up question	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Follow up question	Exclude	
REPLY OF QUESTION	2024-04-04 18:58:07	<p>&gt; &lt;@supressed_user&gt; tnikkel: so this was changed shortly after the original landing: <a href="https://hg.mozilla.org/mozilla-central/rev/855a47b42af501331be597231de9c4bb8a7b3600">https://hg.mozilla.org/mozilla-central/rev/855a47b42af501331be597231de9c4bb8a7b3600</a> ; I don't see comments in the bug to indicate what was going on.</p> <p>&gt; Should we remove the duplicates, replace with previous values, or investigate more?</p> <p>thanks for finding that! i'm guessing that is some sort of cut and paste failure? i think we should restore those two comparisons that were clobbered with a duplicate comparison in that commit. we will probably need to find out what the correct fuzzy value is. if its around 1200-1500 then that should be fine, but if its significantly different from that a quick sanity check would be in order</p> <p>&gt; &lt;@supressed_user&gt; ok, I get that 'for free'? That's cool</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Follow up question	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Follow up question	Exclude	
REPLY OF QUESTION	2024-04-11 12:11:56	<p>SO I tried creating my own tooltip element but it's just ignored by the xhtml dialog:</p> <pre>     &lt;&lt;&lt;js       WindowListener.injectElements('         &lt;window id="filter.ListDialog"&gt;          &lt;toolbox id="quickfilters-toolbox" insertbefore="status-bar"           tooltip="quickFilters ToolTip"&gt;           &lt;toolbar             id="quickfilters-toolbar"             toolbarname="quickFilters Tools"             customizable="false"             mode="icons"              &gt;             &lt;toolbarbutton id="quickFiltersBtnCut"               class="toolbarbutton-1"               label="MSG_quickfilters.menu.cut_"               tooltip="MSG_quickfilters.menu.cut_"               oncommand="quickFilters.List.cutFilters();"               tooltip="quickFilters ToolTip"             /&gt;           &lt;/toolbar&gt;         &lt;/toolbox&gt;          &lt;tooltip id="quickFiltersToolTip" onpopupshowing="alert('test');"/&gt;          &lt;/window&gt;');     &lt;&lt;&lt;   </pre> <p>I tried setting the tooltip element on both the 'toolbarbutton' and the 'toolbox' level.</p> <p><a href="#">image.png</a></p> <p>the element seems to exist on the same level (direct child of '&lt;html id="filterListDialog"&gt;' - but its obviously injected)</p> <p>I also tried getting the original tooltip but that's not accessible through the DOM:</p> <pre>     &lt;&lt;&lt;js       let tt = window.document.querySelector("tooltip[default]");       if (tt) {         tt.style.fontSize = '1em';         tt.style.marginLeft = '1em'       }     &lt;&lt;&lt;   </pre> <p>I can easily set these attributes with the browser inspector (Thunderbird), but I guess that goes lower than the DOM</p> <p>I am able to trigger the 'onpopupshowing' event when I hover on the empty toolbar (sometimes), so it seems to do something on at least one of the elements in the DOM</p> <p><a href="#">image.png</a></p> <p><a href="https://searchfox.org/mozilla-central/rev/058ab60e5020d7c5c98cf82d298aa84626e0cd79/layout/xul/nsXULTooltipListener.cpp#547">https://searchfox.org/mozilla-central/rev/058ab60e5020d7c5c98cf82d298aa84626e0cd79/layout/xul/nsXULTooltipListener.cpp#547</a></p> <p><a href="#">image.png</a></p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Follow up question	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Follow up question	Exclude	

REPLY OF QUESTION	2024-04-11 18:29:12	<p>&gt; &lt;@supressed_user&gt; hi everyone. Do someone have bugs when working with WebRTC in Firefox? Both mobile and desktop. Mostly related to video not being rotated when peer's camera rotates ( in other browsers it's not like that ). And also some odd behaviour when switching cameras on mobile</p> <p>Hi Boris, with what video conferencing software are you seeing these problems? I just joined a whereby.com room from Firefox for Android, and saw video rotating fine for both Chrome and Firefox desktop participants I'm also interested in any odd behavior when switching cameras on Firefox for Android. Feel free to explain here or file as issues using <a href="https://bugzilla.mozilla.org/enter_bug.cgi?product=Core&amp;component=WebRTC%3A%20Audio%2FVideo">https://bugzilla.mozilla.org/enter_bug.cgi?product=Core&amp;component=WebRTC%3A%20Audio%2FVideo</a> and we'll follow up [Here](<a href="https://bugzilla.mozilla.org/buglist.cgi?product=Core&amp;component=WebRTC%3A%20Audio%2FVideo&amp;known_name=WebRTC%3A%20Audio%2FVideo&amp;query_based_on=WebRTC%3A%20Audio%2FVideo&amp;columnlist=cf_rank%2Cshort_desc%2Cstatus_whiteboard%2Cassigned_to%2Cbug_status%2Cpriority%2Ccf_fx_points%2Cchangeddate%2Ccomponent&amp;resolution=---&amp;short_desc=rotate%20rotation&amp;list_id=16985441&amp;short_desc_type=anywordssubstr&amp;bug_status=UNCONFIRMED&amp;bug_status=NEW&amp;bug_status=ASSIGNED&amp;bug_status=REOPENED&amp;query_format=advanced">https://bugzilla.mozilla.org/buglist.cgi?product=Core&amp;component=WebRTC%3A%20Audio%2FVideo&amp;known_name=WebRTC%3A%20Audio%2FVideo&amp;query_based_on=WebRTC%3A%20Audio%2FVideo&amp;columnlist=cf_rank%2Cshort_desc%2Cstatus_whiteboard%2Cassigned_to%2Cbug_status%2Cpriority%2Ccf_fx_points%2Cchangeddate%2Ccomponent&amp;resolution=---&amp;short_desc=rotate%20rotation&amp;list_id=16985441&amp;short_desc_type=anywordssubstr&amp;bug_status=UNCONFIRMED&amp;bug_status=NEW&amp;bug_status=ASSIGNED&amp;bug_status=REOPENED&amp;query_format=advanced</a>) are the rotation bugs I'm aware of</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>	<input checked="" type="checkbox"/>	Question sensitive to the time	Exclude	
REPLY OF QUESTION	2024-04-12 06:29:18	<p>&gt; &lt;@supressed_user&gt; Hi Boris, with what video conferencing software are you seeing these problems? I just joined a whereby.com room from Firefox for Android, and saw video rotating fine for both Chrome and Firefox desktop participants</p> <p>I used Agora sdk and some other, both had same problems that should be manually rotated with css. Yes, it's that bug <a href="https://bugzilla.mozilla.org/show_bug.cgi?id=16985441">2e0bc899-5de1-4aec-8f25-99fd8c248707.jpg</a> and also, maybe someone encountered such a thing: when you use <code>MediaStream</code> from local media devices, and then close a tab, but it's still displayed that the camera is being used. It's Android 14 + latest FF</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Follow up question	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Follow up question	Exclude

REPLY OF QUESTION	2024-05-27 14:42:15	<p>&gt; &lt;@supressed_user&gt; I guess I could call 'nsMemoryInfoDumper::DumpGCAndCCLogsToFile' somewhere?</p> <p>The usual way to debug these is to use the environment variables to log all CCs. See: <a href="https://firefox-source-docs.mozilla.org/performance/memory/gc_and_cc_logs.html">https://firefox-source-docs.mozilla.org/performance/memory/gc_and_cc_logs.html</a> Except you'll want MOZ_CC_LOG_ALL instead of MOZ_CC_LOG_SHUTDOWN. Then you look up what the leaked windows etc look like before it goes away, and then look at the CC where it DOES go away and see if that tells you the missing pieces. (leaked 'until shutdown' means that we closed the test page and ran a bunch of GC/CCs but the windows etc didn't go away, but they did go away before shutdown. Usually this means some kind of global data structure is holding a reference.)</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>	<input checked="" type="checkbox"/>	Follow up question	Exclude
